

## 绝缘测试棒

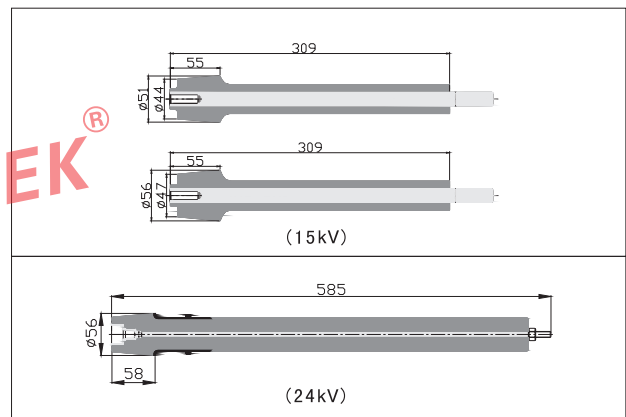

### Insulate to test the stick

15-24kV绝缘测试棒，主要用于15-24kV电缆附件试验耐压检测的高压引入。

按相关标准，对附件进行耐压检测。

1. 15-24kV insulation test stick, mainly used for bring in high voltage of withstand voltage inspection in cable accessories test.
2. According to related standard, do the withstand voltage for the accessories.

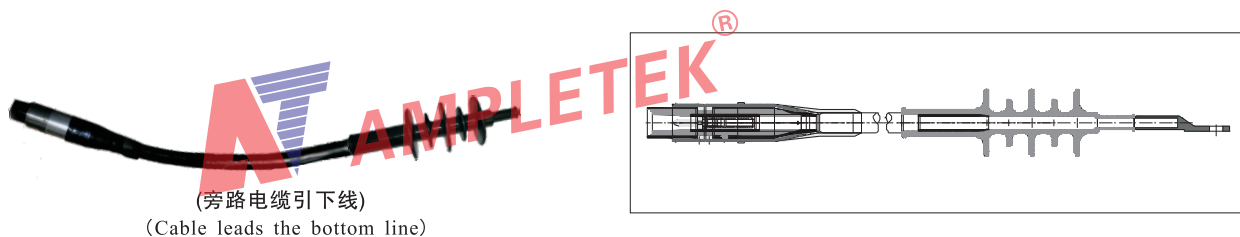

## 旁路电缆引下线

### Bypass cable wire

旁路电缆引下线是一种对柱上开关高压线路进行检修，还可以临时供电，满足用户急需用电需求的装置，安全可靠，方便快捷。

1. Bypass cable wire is the use of an energy saving monitoring technology for high voltage transmission lines maintenance safe and reliable.
2. Can also be temporary power supply, satisfy users need electricity demand, convenient and quick.

## 测试夹具

### Test tongs

250A/630A测试夹具适用于15kV电力系统，用于配电系统的气体绝缘开关、变压器等电气设备的电气性能试验，为保证电网正常安全运行，可靠供电。

1. 250A/630A test tongs is applicable to 15kV electrical system, used for the electric performance test of electric equipments like gas insulation switch, transformer, etc distribution systems.
2. In order to ensure the electric net operation well, please provide dependable electricity.

Type: AZCS-15/250K  
(250A直插测试夹具)  
(Straight connector test tongs)
